

ADMINISTRATIVE POLICY STATEMENT

TrueCare

Policy Name & Number	Date Effective
Non-Invasive Vascular Studies-TrueCare-AD-1356	07/01/2025
Policy Type	
ADMINISTRATIVE	

Administrative Policy Statements are derived from literature based on and supported by clinical guidelines, nationally recognized utilization and technology assessment guidelines, other medical management industry standards, and published MCO clinical policy guidelines. Medically necessary services include, but are not limited to, those health care services or supplies that are proper and necessary for the diagnosis or treatment of disease, illness, or injury and without which the patient can be expected to suffer prolonged, increased, or new morbidity, impairment of function, dysfunction of a body organ or part, or significant pain and discomfort. These services meet the standards of good medical practice in the local area, are the lowest cost alternative, and are not provided mainly for the convenience of the member or provider. Medically necessary services also include those services defined in any Evidence of Coverage or Certificate of Coverage documents, Medical Policy Statements, Provider Manuals, Member Handbooks, and/or other plan policies and procedures.

Administrative Policy Statements do not ensure an authorization or payment of services. Please refer to the plan contract (often referred to as the Evidence of Coverage or Certificate of Coverage) for the service(s) referenced in the Administrative Policy Statement. Except as otherwise required by law, if there is a conflict between the Administrative Policy Statement and the plan contract, then the plan contract will be the controlling document used to make the determination.

According to the rules of Mental Health Parity Addiction Equity Act (MHPAEA), coverage for the diagnosis and treatment of a behavioral health disorder will not be subject to any limitations that are less favorable than the limitations that apply to medical conditions as covered under this policy.

A. Subject**Non-Invasive Vascular Studies****B. Background**

Non-invasive vascular studies utilize ultrasound to assess irregularities in blood flow in arterial and venous systems. Testing can be performed in a vascular laboratory and at the bedside and is often the first step in diagnosing vascular disease. Results may display as a two-dimensional image with a spectral analysis and color flow. The results of these tests will determine the need for more non-invasive testing or procedures to treat vascular disease.

C. Definitions

- **Duplex Scan** – A non-invasive evaluation of blood flow through the arteries and veins, by combining the use of Doppler ultrasound with two-dimensional structure and motion with time and spectrum analysis and/or color flow velocity or mapping.
- **Non-Invasive Testing** – Utilizes various types of technology to evaluate flow, perfusion, and pressures within the vessels at rest and with exercise.

D. Policy**I. Non-invasive vascular study includes:**

- A. providing patient care during the study
- B. supervision of the procedure
- C. interpretation of study results with hard copy output or digital storage of imaging is acceptable

II. All non-invasive vascular diagnostic studies must be performed under at least 1 of the following situations:

- A. Performed by a physician competent in diagnostic vascular studies or under the general supervision of physicians who have demonstrated minimum entry level competency by being credentialed in vascular technology.
- B. Performed by a technician certified in vascular technology.

III. When the physician/provider can document medical necessity in the patient's medical record, duplex scanning and physiologic studies may be reimbursed during the same encounter if the physiologic studies are abnormal and/or to evaluate vascular trauma, thromboembolic events or aneurysmal disease.**IV. The use of any Doppler device that produces a record, but does not permit analysis of bidirectional vascular flow or that does not provide a hard copy or printout, is part of the physical exam of the vascular system and is not reported separately.****V. Noninvasive vascular studies are considered medically necessary when **all** of the following criteria are met:**

- A. The member experiences significant signs/symptoms of arterial or venous disease.

- B. The information provided by the test is required for medical and/or surgical decision making.
- C. The test is not redundant to other diagnostic procedures that will be performed.

VI. TrueCare may request documentation to support medical necessity, including the non-invasive vascular study hard copy or digital copy results.

E. Conditions of Coverage

The physician or technician must be capable of demonstrating documented training and experience and maintain any applicable documentation upon TrueCare's request.
